

Flexible Workspace + Acoustic Privacy

Case Study

Location

Hanover, Germany

Product & End-Use

Alphacoustic, Sound Absorbing Sheer by Creation Baumann

Architecture firm Aherns & Grabenhorst required both sound absorbing materials and flexible private meeting space in their new studio: a converted bank in Old Hanover. Sound absorbing sheer textiles were selected to optimize the acoustics of the room, provide privacy and create spatial zoning and separation of different working areas.

“The transparent materials contribute to a pleasant brightness while providing sound absorbing acoustics.”

Roger Aherns, Partner

The studio was created around an Atrium made of glass. “The room concept included flexible scenarios with a bright, welcoming atmosphere,” says Aherns. Alphacoustic is fixed to a sliding track which allows the architects to create a separate conference room in the middle of the studio. “The fabric provides security for undisturbed meetings,”

Prof. Gesche Grabenhorst.
